MySQL Troubleshooting with PMM

Peter Zaitsev,
Founder at Percona
1 Feb 2024

PERCONA

The Presentation

➢ Intro to Performance Optimization and Troubleshooting

➢ Intro to Percona Monitoring and Management (PMM)

➢ Demo

PERCONA

Performance Optimization and Troubleshooting

Outcomes

- **Developer**
  - I want this damn database to work

PERCONA

Outcomes

- **Manager**
  - I want this database not to cost so much money to run

PERCONA

Outcomes

- **DBA**
  - I do not want to spend too much time and effort keeping Developer and Manager Happy

PERCONA

Queries

- ❑ **Executed with Great Performance**
- ❑ **Correct Result**
- ❑ **Not Impacting other Applications**
- ❑ **Not Using Too Much Resources**

PERCONA

Database Focus

While we can capture queries and their timing on application side, execution details are only available on Database Side
Application Responsibility

Application is responsible for volume and kinds of queries it generates

PERCONA

Resource Focus

Oversubscribed resource can make even simple queries run slow

PERCONA

Primary Raw Resources

Resource Utilization

- ✓ **Other Queries**
- ✓ **Database Background Activities**
- ✓ **Other Processes on the same Node**
- ✓ **Noisy Neighbors**

PERCONA

Approach

It may make sense to approach Performance Optimization and Troubleshooting from Resource side or Queries Side.

Percona Monitoring and Management (PMM) enables both

Percona Monitoring and Management (PMM)

PMM at Grance

- ❑ Purpose build Monitoring/Observability platform focused on Databases
- ❑ 100% Free and Open Source
- ❑ Roll your own, On Prem and In the Cloud
- ❑ Supports MySQL, MongoDB, PostgreSQL
- ❑ Supports Cloud Based database deployments such as Amazon RDS

PERCONA

PMM Provides

Bring together your Devs and Ops to build better apps faster and run Open Source Databases better
